

## Integration Bridge

The Integration Bridge (IB3) is a powerful desktop application that maximizes your IT-ROI when it comes to data integrations. The Ib3 allows users to rapidly create and execute data integrations to and from your enterprise applications, and there are no limits to what type of data can be integrated.

# Value for Money

What it takes to successfully complete a single integration.

- Average of 8 weeks of consultant work for a full integration to be completed (with the IT consultant working a standard 40 hour work week).
- Certified IT consultants are in high demand and in short supply worldwide.
- This reality adds significant additional costs (airfare, meals, and accommodation expenses) for the 8 weeks the IT consultant is on site.
- The end result -- a single enterprise Integration will cost your company several tens of thousands of dollars, and will take approximately two months.

### The question is -

Would you prefer to save your shareholders or taxpayers 70% or higher on integration costs and have your integrations in production in a fraction of the time?

If that is the case, you need to take a serious look at IT-ROI's Integration Bridge to solve your data integration and interface needs!

A Single Enterprise Application Integration	Hours Required	
	Current Industry Standard	IB3 New Industry Standard
Task		
Gather Business Requirements	8	8
Query Data Source	8	8
Map Source to WSDL	24	2
Nested Tags/Batching/MultiThreading	72	0
Error Handling/Reporting	40	0
Notifications	16	0
Custom Business Logic/Validation	40	8
Testing	40	0
Deployment	8	0
Support (yearly)	40	0
<b>Total Hours:</b>	<b>296</b>	<b>26</b>

# iB3 Versatility -

There are no limits to what type of data can be integrated.

The left is finally talking to the right!
